Project title

Reports management system

01 Executive summary

Project Summary:

In customer service, the most common issue faced by agents is handling complaints—particularly those related to internet problems, which account for over 75% of all calls. The main challenges for management are lengthy handling times and failure to meet key performance indicators (KPIs).

This complaint management system aims to provide a fast and simple verification portal, with two primary objectives:

Reducing call handling time.

Resolving the majority of business issues related to internet connectivity.

Business objectives

- Reduce average handling time by approximately 30%.
- Enhance customer satisfaction by resolving common issues.
- Improve the management of internet-related complaints.

Success criteria

- Handling time

- User satisfaction
- Data accuracy

02 Project scope

Define the boundaries of the project, including what is and isn't included.

Within scope

- Register a new complaint
- Classify issue type (complete outage, slow connection, intermittent connection, weak signal)
- Update complaint status (new, in progress, resolved, closed)
- Search for complaints
- Basic reports (number of complaints, average resolution time, recurring complaints)

Out of scope

- Other service complaints
- Assign and schedule field technicians (Field Force)
- Automatic issue classification

03 Key stakeholders

List all individuals, teams, or organizations that have a significant interest in the project's success.

Key stakeholders	Roles and responsibilities	Level of involvement
Frontline Customer Service	• Search for complaints	Low ▾
Advanced	• Search for complaints	Low ▾

- Add complaints

Technical Support	• Verify complaints • Update complaints • Close complaints	 Medium ▾
Customer Service Supervisor	• View all complaints (for assigned team) • Reassign complaints • Review closed complaints • View team performance reports	 High ▾
System Administrator	• Manage user permissions • Configure issue categories • Set up workflows • Manage backups and system settings	 High ▾

04 Business requirements

List the high-level business requirements for the project.

ID	Business Requirement	Description
BR-01	Automated Complaint Registration	Transition the complaint registration process from paper and Excel to a unified electronic system

BR-02	Standardized Workflow	Establish a unified workflow for complaint handling to ensure consistent procedures across all departments
BR-03	Real-Time Complaint Tracking	Provide immediate visibility into complaint status for all relevant parties based on their access permissions
BR-04	Performance Reports	Generate periodic reports on complaint processing efficiency and average resolution time to support decision-making
BR-05	Access Security	Ensure each user accesses only the data and permissions authorized according to their role

05 Functional requirements

Detail the specific functions the system must perform.

ID	Functional Requirement	Category	Description	Level of involvement
FR-01	Add New Complaint	Complaint Management	Add a new complaint (customer number, issue type, details)	 High ▾
FR-02	Search Complaints	Complaint Management	Search for complaints (complaint number, customer number, phone number, date range, status)	 High ▾
FR-03	View Complaint Details	Complaint Management	View complaint details with update history	 High ▾
FR-04	Update Complaint Status	Complaint Management	Update complaint status (new, in progress, resolved, closed)	 High ▾
FR-05	Close Complaint	Complaint Management	Close a complaint with closure reason	 High ▾
FR-06	Reopen Complaint	Complaint Management	Reopen a closed complaint	 Medium ▾

FR-07	Reassign Complaint	Complaint Management	Reassign a complaint to another agent	 Medium ▾
FR-08	Issue Classification	Classification	Classify issues (complete outage, slow connection, intermittent connection, weak signal)	 High ▾
FR-09	Manage Classifications	Classification	Manage classifications (add, edit, disable) by System Admin	 Medium ▾
FR-10	Complaints Report	Reports	Report on complaint volume by date range, type, status, region	 High ▾
FR-11	Agent Performance Report	Reports	Report on agent performance (number of complaints handled, average resolution time)	 Medium ▾
FR-12	Recurring Complaints Report	Reports	Report on recurring complaints	 Low ▾
FR-13	Export Reports	Reports	Export reports in Excel and PDF formats	 Medium ▾

FR-14	User Management	Users	Add, edit, and disable users	High ▾
FR-15	Role-Based Permissions	Users	Assign permissions based on role (Role-Based Access Control)	High ▾
FR-16	Audit Log	Users	Log all system activities (Audit Log)	Medium ▾
FR-17	Authentication	Users	Login with username and password	High ▾

06 Non-functional requirements

Specify the quality attributes and constraints of the system:

Performance	• System response time under 3 seconds for most operations (search, add, update) • Page load time under 2 seconds for main pages • System uptime of 99.5% during official working hours • Report export (Excel, PDF) in under 10 seconds • Resume operations without data loss within one hour of failure
Security	• Encrypt passwords (hashing) and all communications via HTTPS • Prevent users from accessing any data beyond their authorized permissions (RBAC) • Automatic session timeout after 30 minutes of inactivity • Temporarily lock the account after 5 failed login attempts • Log all activities (who, when, what changed) for audit purposes • Password must be at least 8 characters, including one uppercase letter, one number, and one special character
Reliability	• No registered complaint is lost under any circumstances • Automated daily data backup • Ability to restore data from backup within 4 hours • Resume operations without data loss within one hour of failure • Audit log retains all activities for 3 years
Usability	• The complaint submission process does not

exceed 3 main steps

- New users can complete basic tasks within one day of training
- A main search bar is available at the top of all pages
- Error messages are clear and provide the cause of the error along with guidance on how to resolve it
